

Meeting Agenda

Date: 17/05-2013

Facilitator: Patricia Paulsson

Participants: Danny, Sara, Laszlo, Patricia

1. Objectives (5 min):

Everybody must finish their parts to make the application work. Hard to establish which text pane is select, etc. Use STAN, avoid circular coupling.

2. Reports (15 min):

3. Discussion items (35 min)

(a) PDF handling is implemented. What happens when you have a Document longer than one page? Maybe handle it in the GUI with scrollers.

(b) Download and install STAN, avoid circularity.

4. Outcomes and assignments (5 min)

(a) Sara keeps working on her part, RMText, tries to make focusing work.

(b) Danny has implemented some Undo/Redo functionality, but is not sure of how to connect it to the text areas. Same problem as Sara.

c) Laszlo is done with his part, but is wondering if he should start implementing printing or not. There are more important functions to implement, but others are already working on them to some extent.

d) Patricia still has to finish working on ImageHandler. One should be able to browse among files to select an image to load. Import image.

5. Wrap up

Next meeting, next Friday, 24/5.
